
Setup Omax Node:

Region: add EC2 instances to Sydney, OmaxVPC, Public2 network.
After multi-region validators can be added from anywhere.
API nodes can join from anywhere already.
Security group: API-SG

System requirements:

Ubuntu 20.04 or similar

Minimum: 2x CPU, 8GB RAM / Recommended at least 4x CPU, 16GB

300GB Hard Disk.

The setup uses Docker, so it should work on any system supporting docker and docker-compose. The scripts install these dependencies automatically.

Setup instructions:

Download and extract the following file into a new folder:

[Download Omax Add Note](#)

Setup prerequisites:

`./pre-setup.sh`

Run the node:

`./start.sh`

Run the following command to get the enode ID for your node:

`./enode.sh`

stop.sh: resume.sh: remove.sh: list.sh:	stops the blockchain, keeps the data. restarts a stopped blockchain. Used after stop.sh. stops the blockchain and removes all data. lists current API endpoints. displays the node's information.
